**UPUTSTVO ZA UPOTREBU BATERIJA**

Prilikom izrade kataloga imali smo u vidu da se na tržištu baterija nudi izuzetno široka lepeza proizvoda koji u zavisnosti od proizvođača obuhvataju različite grupe baterija. Prikazujemo vam jednu od najširih lepeza proizvoda u oblasti baterija za široku potrošnju.

**Kako ispravno koristiti ponovo punjive baterije**

Kako bi baterija uopšte bila u stanju da postigne svoj najveći broj ciklusa, potrebno je ispravno korišćenje i održavanje. Ne zaboravite, neodgovarajućim rukovanjem možete trajno oštetiti bateriju već posle prvog korišćenja! Naime, iako deluju prilično izdržljive, napa njom se mogu lako oštetiti. Postoji nekoliko stvari koje korisnik mora poštovati da bi produžio životni vek svoje baterije.

**Formiranje baterije**

Kada po prvi put dobijete bateriju, biće potrebno "formirati" bateriju. Najčešće je neophodno potpuno napuniti i do kraja isprazniti bateriju tri ili četiri puta pre nego što bude moguće koristiti njen maksimalni kapacitet. Ovo važi za sve tipove baterija. Pri prvom punjenju baterije, telefon ili kamera može neispravno pokazati oznaku napunjenosti nakon samo nekoliko minuta. Ne brinite. Potrebno je ostaviti punjač uključen narednih 14-22 sata u zavisnosti od tipa punjača bez obzira na upozorenje da je baterija već napunjena. Ako neko vreme ne nameravate da koristite vašu bateriju, potrebno je skloniti na suvo i hladno mesto. Toplota i obiljni metalni predmeti mogu uništiti bateriju. Zbog toga što se baterija vremenom sama od sebe isprazni, pre ponovne upotrebe potrebno je ponovo formirati istu, pa nije poželjno odlagati obnovljivu bateriju na duži vremenski period. Kako bi zadržala normalne osobine i karakteristike koje pripisuje proizvođač naš savet je da prilikom bilo kakve upotrebe obavezno pročitate uputstvo koje se nalazi uz svaki proizvod.

**Memorijski efekat**

Ako se baterija ne prazni do kraja pre ponovnog punjenja, njen energetska kapacitet se postepeno smanjuje. Ova pojava se naziva memorijski efekat, a posledica je gomilanja mehurića gasa na stranicama čelija. Nikl-kadmijumske baterije su posebno sklone ovom problemu. Zbog toga bi korisnici trebali potpuno isprazniti bateriju na kraju svakog ciklusa. Nikal-metal hidridne baterije su nešto tolerantnije prema nepotpunom pražnjenju, a napredovanjem tehnologije penastih elektroda u potpunosti je prevaziđen ovaj problem. Za litijum-jonske i litijum-polimerske baterije, memorijski efekat je nepoznata kategorija.

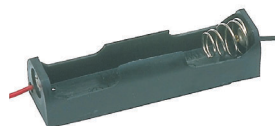

**Dodatne napomene za pravilnu upotrebu**

Životni vek baterije je u najvećem broju slučajeva veliki, ako se s njom ispravno postupi. Baterija nikad ne sme doći u dodir s metalnim predmetima koji mogu kratko spojiti baterijske kontakte; na primer ključevi u džepu. Baterija može eksplodirati u kontaktu s vatrom. Nikad ne rastavljajte bateriju, takve poslove prepustite specijalizovanim servisima. Ako posumnjate u ispravnost baterije, donesite nam je i mi ćemo je za Vas testirati. Ako se ne koristi, puna baterija će se isprazniti tokom nekoliko meseci. Ukoliko je ne koristite, treba je čuvati ispraznjenu na hladnom, mračnom i suvom mestu. Izlaganje povišenoj temperaturi, direktnim sunčevim zracima i vlažna sredina trajno oštećuje bateriju.
